

0.1 Overview

The figure above represents an high-level description of the main components which constitute the system-to-be. They are organized in a 4-layers architecture, in particular:

Web Browser : is the Presentation Layer for the Municipality Web Browser, communicates with the Web Server;

Mobile application : is the Presentation Layer for the User mobile application, communicates with the Web Server;

Web Server : represents the Service Layer, communicates with the Municipality Web Browser and with the Mobile application on one hand (to the Presentation Layer) and with the components of the Application Server on the other (to the Business Layer);

Application Server : represents the Business Layer of the system, communicates with the Web Server on one hand and with the Data Access Layer on the other;

Data Access Object and Database : represent the Data Access Layer of the system, Database communicates with the Business Layer through the DAO.
